RAWD OFFICIAL MEASURER

INSTRUCTIONS FOR MEASURING TYPICAL WHITE-TAILED DEER

All measurements must be made with a 1/4-inch wide flexible steel tape to the nearest one-eighth of an inch. (Note: A flexible steel cable can be used to measure points and main beams only.) Enter fractional figures in eighths, without reduction. Official measurements cannot be taken until the antlers have air dried for at least 60 days after the animal was killed.

- A. Number of Points on Each Antler:** To be counted a point, the projection must be at least one inch long, with the length exceeding width at one inch or more of length. All points are measured from tip of point to nearest edge of beam as illustrated. Beam tip is counted as a point but not measured as a point.
- B. Tip to Tip Spread** is measured between tips of main beams.
- C. Greatest Spread** is measured between perpendiculars at a right angle to the center line of the skull at widest part, whether across main beams or points.
- D. Inside Spread of Main Beams** is measured at a right angle to the center line of the skull at widest point between main beams. Enter this measurement again as the Spread Credit *if* it is less than or equal to the length of the longer main beam; if greater, enter longer main beam length for Spread Credit.
- E. Total of Lengths of all Abnormal Points:** Abnormal points are those non-typical in location (such as points originating from a point or from bottom or sides of main beam) or extra points beyond the normal pattern of points. Measure in usual manner and enter in appropriate blanks.
- F. Length of Main Beam** is measured from the center of the lowest outside edge of burr over the outer side to the most distant point of the main beam. The point of beginning is that point on the burr where the center line along the outer side of the beam intersects the burr, then following generally the line of the illustration.
- G-1-2-3-4-5-6-7. Length of Normal Points:** Normal points project from the top of the main beam. They are measured from nearest edge of main beam over outer curve to tip. Lay the cable along the outer curve of the beam so that the top edge of the cable coincides with the top edge of the beam on both sides of the point to determine the baseline for point measurements. Record point lengths in appropriate blanks.
- H-1-2-3-4. Circumferences** are taken as detailed in illustration for each measurement. If brow point is missing, take H-1 and H-2 at smallest place between burr and G-2. If G-4 is missing, take H-4 halfway between G-3 and tip of main beam.

What method was used to kill this deer? Modern Gun Muzzleloader Bow Crossbow

ENTRY AFFIDAVIT FOR ALL HUNTER-TAKEN WHITE-TAILED DEER

For the purpose of entry into the Records for Alabama's White-tailed Deer program, I certify the white-tailed deer scored on this chart was not taken in violation of the game laws or regulations of the federal government or the State of Alabama and was not taken in an escape-proof enclosure. In signing this statement, I understand that if the information provided on this entry is found to be misrepresented or fraudulent in any respect, it will not be accepted into the Records of Alabama's White-tailed Deer, all of my other entries are subject to deletion, and any future entries may not be accepted.

The Alabama Division of Wildlife and Freshwater Fisheries may exclude the entry of any animal it deems to have been taken in an unethical manner or under conditions deemed inappropriate.

Date: _____ Signature of Hunter: _____
(SIGNATURE MUST BE WITNESSED BY AN OFFICIAL MEASURER OR NOTARY PUBLIC)

Date: _____ Signature of Notary or Official Measurer: _____
